The ASA, CSSA, and SSSA represent more than 8,000 members and are dedicated to supporting scientists, educators, industry, government employees, and practitioners around the world.

As nonprofit society publishers, we produce the most-trusted and well-respected peer-reviewed journals in agronomic, crop, environmental, and soil sciences.

Publishing with professional societies allows for reinvestment in your field through mission-based programs.

The ASA, CSSA, and SSSA are dedicated to accessible research for everyone.

<td>Universita di Pisa, Italy</td>
<td>Agronomy Journal Publishes original research in agriculture, natural resource sciences, soil science, crop science, agroclimatology, agronomic, production agriculture, and instrumenta</td>
<td>Crop Science is a top international journal in the fields of crop breeding and genetics, crop physiology, and crop production and is a critical outlet for articles describing plant germplasm collections and their use. The articles featured are of interest to researchers, policy makers, educators, and practitioners and include original research, review, and interpretive articles.</td>
<td>Soil Science Society of America Journal publishes basic and applied soil research in soil chemistry, soil physics, soil pedology, and hydrology in agricultural, forest, wetlands, and urban settings. The journal is a venue for interdisciplinary soil scientists, biogeochemists, and agronomists.</td>
<td>Journal of Environmental Quality publishes original research, reviews and analyses, and perspectives articles that address anthropogenic impacts on water, soil, and the atmosphere and pertain to some aspect of environmental quality in natural and agricultural ecosystems.</td>

**Journal Brief Overview**

*Crop, Forage & Turfgrass Management* covers all aspects of applied crop, forage, and grazing lands, and turfgrass management. The journal publishes research, briefs, reviews, perspectives, and diagnostic and management guides that are useful to researchers, practitioners, educators, and industry representatives.

*Journal of Plant Registrations* publishes research describing new and novel plant cultivars, germplasms, parental lines, genetic stock, and genomic mapping populations. The premier international venue for plant breeders, geneticists, and genome biologists, the journal audience also serves policy makers, humanitarian organizations, and all facets of food, feed, fiber, bioenergy, and shelter industries.

*Natural Sciences Education* articles are written by and for educators in the areas of plant science, natural resources, animal science, ecology, the environment, entomology, and more. The journal includes articles related to extension, universities, industry, administration, and grades K–12.

**Journal Brief Overview**

*Agricultural & Environmental Letters* is a fully open access journal, publishing communications on major scientific, policy, and economic issues that span the entire range of the agricultural and environmental sciences. Papers include high-impact, broad-reaching, and timely research on major scientific advances that have immediate implications and elicit discussion within the agricultural community as well as provide information to policy makers.

*Agrosystems, Geosciences & Environment* is a fully open access journal publishing studies limited in geography or time, confirmatory articles, and reports of negative results, focusing on all aspects of agriculture, plant, environmental, and soil science. The journal publishes original research as well as critical reviews. Articles are of interest to researchers, policy makers, educators, and practitioners.

*The Plant Genome* is a fully open access journal that provides the latest advances and breakthroughs in plant genomics research, with preference to frontier genomic advances and novel reports that use innovative genomic applications that advance our understanding of plant biology that may have applications to crop improvement.

### Journal Brief Overview

**The Plant Phenome Journal** is a transdisciplinary, fully open access journal that focuses on original research, interpretations, and datasets investigating all aspects of plant phenomics. The journal is a forum that combines engineering, remote sensing, computer science or data science with plant science, breeding, genetics, or agronomy.

**Urban Agriculture & Regional Food Systems** is a multidisciplinary open access journal that publishes original research and reviews on urban and peri-urban agricultural production for food and other human-related services. By focusing on the full range of dimensions related to urban and regional agriculture (production, ecological, social, and cultural), the journal aims to explore, analyze, and critically reflect upon these activities through a range of spatial contexts and relations.

**Vadose Zone Journal** is an international, fully open access journal that serves as an outlet for interdisciplinary research and assessment of the vadose zone, the portion of the critical zone that comprises the earth’s critical living surface down to groundwater. The journal publishes original research, reviews, and special sections across a wide range of disciplines.

Authors: Promote Your Research

Here are some ways to help your research reach a larger audience, improve downloads, and increase citations:

- Harness the power of social media
- Publish a brief video summary along with your journal article
- Use article sharing features for unlimited distribution of a full-text, read-only version of your article
- Publish your article as open access
- Share your data on a relevant repository
- Publish on a preprint server to generate interest for your article
- Submit a graphical abstract with your manuscript to convey your main message
- Talk about your research at networking and speaking events
- Repost your research in connection to conferences and news events

Peer Review and Reviewer Recognition

- Peer reviewers evaluate submissions for innovation and novel results fairly, rapidly, and confidentially
- Reviewers from all over the world are welcomed, and authors often review
- Responsible review provides an opportunity to remain up to date in your area of research, improve your writing, learn about the publication process, and advance your career
- By reviewing with us, you are supporting your scientific community and helping to increase awareness of your field
- The ASA, CSSA, and SSSA annually award editors’ citations for excellence in peer review
- Notable peer reviewers are appointed to the ASA, CSSA, and SSSA Peer Review Advisory Committee
- The societies also offer recognition via Web of Science Reviewer Recognition service, certificates, and publishing of reviewer names annually

Support for Open Science

To ensure scientific research reaches a broad audience, the ASA, CSSA, and SSSA:

- Remain strong in support of the pillars of open science
- Publish six gold open access journals
- Offer open access options in seven hybrid journals
- Make articles featured online and in magazines free-to-read
- Support data deposit in Dryad
- Encourage posting of pre prints
- Provide article sharing links
CSA News Magazine

CSA News is the official monthly magazine, for members of ASA, CSSA, and SSSA. CSA News publishes research features and highlights as well as member, science policy, and meetings news. Career, job listings, and education information is also available. Published online and in print, CSA News is available to current members and subscribers.

Crops & Soils Magazine

Crops & Soils is the bimonthly magazine for Certified Crop Advisers, agronomists, and soil scientists. Crops & Soils focuses on practical solutions to the daily challenges facing professionals working in the field and features self-study CEU articles and quizzes.

ASA, CSSA, and SSSA Books

The ASA, CSSA, and SSSA have over sixty years of experience publishing electronic and print books with more than 340 titles available.

- Our books reach millions of users with all levels of experience and knowledge, and include textbooks, reference books, and management guides
- Our editors provide extensive author support from development through production of your title
- The ASA, CSSA, and SSSA book publishing program features rigorous scientific peer review in the development of all content
- All new works are available in ePub, PDF, and print formats
The American Society of Agronomy (ASA), founded in 1907, empowers scientists, educators, and practitioners in developing, disseminating, and applying agronomic solutions to feed and sustain the world. The ASA provides information about agronomy in relation to agronomic production, biometry and statistical computing, climatology and modeling, education and extension, environmental quality, global agronomy, and land management and conservation.

The Crop Science Society of America (CSSA), founded in 1956, is dedicated to the discovery and application of plant science solutions to improve the human condition and protect the planet. Crop science is highly integrative and employs the disciplines of conventional plant breeding, transgenic crop improvements, plant physiology, and cropping system sciences to develop and improve varieties of agronomic, turfgrass, and forage crops to produce feed, fiber, food, and fuel.

The Soil Science Society of America (SSSA), founded in 1936, advances the field of soil science, the transfer of knowledge, and practices to sustain global soils. The SSSA shares information about soils in relation to crop production, environmental quality, forestry, ecosystem sustainability, bioremediation, waste management, urban uses, mining, and reclamation across many closely related scientific disciplines and applied fields.

Based in Madison, Wisconsin, the ASA, CSSA, and SSSA share a cooperative relationship and support their members by providing peer-reviewed publications, scientific meetings, educational programs, professional recognition, awards, and career services, among other benefits.
